

Tested scenarios

#1 - Valid login

Scenario: The user performs a login in the onboarding page (with valid credentials)
Given the webpage has a feature to login to the home page
When the user enters a valid username and password
Then the home page is displayed

#2 - Invalid login

Scenario: The user performs a login in the onboarding page (with invalid credentials)
Given the webpage has a feature to login to the home page
When the user enters an invalid username and password
Then the login fails and a warning is displayed

#3 - Logout

Scenario: Logs out of the account
Given the webpage has a feature to logout
When the user is logged in and clicks on "logout"
Then the webpage will show the onboarding page again

#4 - Sort products by price

Scenario: The user uses the filter to sort the products (from high to low)
Given the user wants to filter the products in the webpage
When the user opens the filter dropdown and clicks on "high to low"
Then the product list will be sorted from high to low

#5 - Add product to cart

Scenario: The user adds a product to his cart
Given the user wants to save a product for buying it later
When the user clicks on the "add to cart" button next to a product
Then the product will be saved in the user's cart

#6 - Remove product from cart

Scenario: The user removes a product from his cart
Given the user wants to delete a product from his cart
When the user enters his cart and clicks on the "Remove" button next to a product
Then the product will be removed from the user's cart
